6. Keep the project within budget.

Mead Johnson's project team took great care in selecting the engineering firm for phase 1. For the project to be successful, the team was convinced the correct engineering firm needed technical competence, flexibility, and empathy with the schedule; the winner also needed to be void of bureaucracy and stubbornness. "We were looking for a firm who could partner with our people, understood our needs, and could make the most out of our existing documentation," explains Richard Noel, senior process engineer.

Phase 1 activities were awarded to Malisko Engineering (St. Louis, Mo.) with effort commencing immediately and completing in December when the request for quote package was completed.

Mead Johnson's project team was led by...
